

Installation instructions

- * Install the sunshade at the high corners of the fence, forming a right angle. The fence should be between 7ft and 9ft high.
- * Using a step ladder, install the sunshade so that the 'Stay Cool As A Pickle' logo tag is on the side facing the ground, and the logo in the left corner.
- * Use two of the four double latch hooks provided for the middle and use one on each side (refer to the diagram at the bottom).
- * Attach the first two hooks to the D-ring in the middle and secure them to either side of the fence line, with the corner fence pole in the center.
- * 2 Carabiners are included which can be used in place of the 2 double latch hooks to provide a tighter fit to the fence line, with corner fence pole in the center.
- * Attach the third and fourth hooks to the D-rings at the other ends and secure them to the sides of the fence line.
- * The double latch hooks' flexibility allows for quick removal or setup of the sunshades in less than 2-3 minutes.

- * Note: you may want to adjust the slope of the sides, either lower or higher, according to your facility's preference.
- * An optional lock can be purchased separately if you wish to secure the sunshade in place.
- * For optimal shade coverage, it is advised to install the sunshade on every high corner of the fence line.
- * It is recommended to take down the sunshade when the season ends and the nets come down.
